Abstract

Write an informative abstract with sufficient detail (200-400 words) to allow the Scientific Committee to evaluate the contents of the proposed paper. Remember that the abstract will be due **before January 12, 2017**. The paper size should be set at A4 (not American quarto). Margins should be 30 mm on left and right, 25 mm at top and bottom. Paragraphs should be separated by an empty line in this way. Text should be justified.

Citations within the text should include the author's last name and year: "The air conditioner data (Proschan, 1963) ...", or when the author is used as a noun in the sentence: "Proschan (1963) presented a data set ...".

In text, captions, and table headings, list all authors if two or fewer, and just the first author followed by "and others" for more. Examples:

(Jones and Johnson, 1986; Emmanuel and others, 1989)

or

Emmanuel and others (1989) showed that ..., whereas Jones and Johnson (1986) found that ...

When giving a quote or referring to a specific fact or formula in a book or from an article of more than 8 pages, the citation should include the page number. Examples:

(Chayes, 1956, p. 55) or (Matheron, 1975, p. 229).

Page numbers should not be given in the text when referring to the work as a whole. As with figures, you do not need to direct the reader to "see" a citation to the literature. Be sure your references are accurate and formatted correctly.

References

Use first level no-numbered headings. The bibliography should follow the *Chicago style*. See below for examples.
